Snitch Fashion Analysis Using Excel and Power BI

Problem Statement:

The Snitch Fashion Sales dataset contains transactional data including product categories, customer details, sales, profit, cities, and business segments. However, the dataset shows inconsistencies such as missing values (e.g., Segment), negative profits, and possible data quality issues.

The goal is to clean, transform, and analyse the dataset to generate actionable insights that can help improve:

- Revenue growth
- Profit margins
- Market expansion strategy
- Operational efficiency

Data Cleaning Process Using Excel:

Removed irrelevant and unwanted columns that do not contribute to analysis, improving dataset clarity and performance**.**

Handled missing values in key columns (e.g., Segment) by either:

- Filling with appropriate default values, or
- Treating them separately to avoid skewed analysis.

Standardized text data across columns:

- Applied TRIM to remove extra spaces
- Used CLEAN to eliminate non-printable characters

- Applied PROPER functions for consistent formatting

Corrected inconsistent city names (e.g., "hyderbad" → "Hyderabad", "bengaluru" → "Bengaluru") to ensure accurate grouping and analysis.

- Checked and removed duplicate records to avoid inflated sales and profit values.
- Identified and validated negative profit values:
- Ensured they are real (loss-making transactions) and not calculation errors.

Converted data types where necessary:

- Ensured numerical columns (Sales, Profit, Quantity) are properly formatted
- Ensured date columns (if any) are in correct date format

Split combined columns where required:

- Example: separated location-related fields into structured components (if applicable)

Handled blank and null rows:

- Replaced with meaningful values or removed where necessary to maintain data integrity

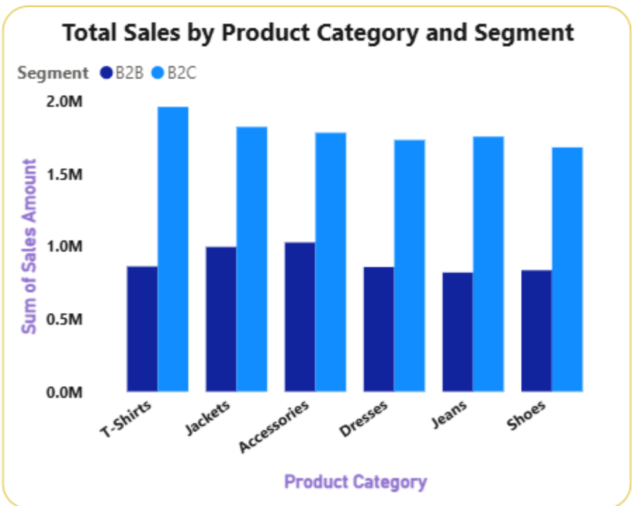
Chart Representation Using Power BI:

Clustered Column Chart:

Key Insights:

- T-Shirts, Jackets, and Accessories lead sales — all three are close to the 3M mark, making them the top-performing categories with minimal difference between them.
- Dresses, Jeans, and Shoes trail slightly — clustered around 2.5M–2.6M, they underperform compared to the top three, though the overall gap across all categories is relatively narrow.
- Sales are remarkably consistent across categories — the range between the highest and lowest is roughly ~0.3M, suggesting a well-balanced product portfolio with no single dominant or failing category.

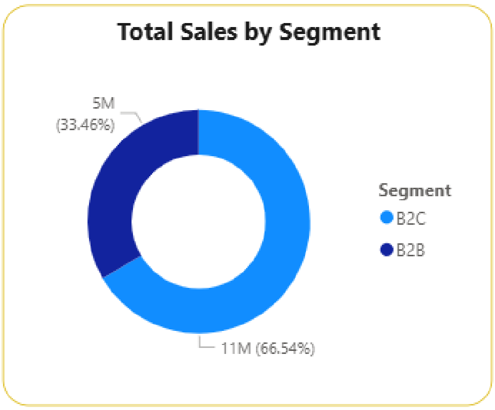
Clustered Column Chart:



Key Insights:

- B2C dominates across all categories — the light blue B2C bars consistently outperform B2B in every product category, with B2C sales ranging around 1.7M–2.0M compared to B2B's 0.8M–1.0M, indicating a stronger consumer-facing market.
- T-Shirts show the largest B2C–B2B gap — B2C sales are nearly ~2.0M while B2B sits at just ~0.8M, making it the category with the widest segment disparity and the highest B2C performance overall.
- Accessories stands out in B2B — it records the highest B2B sales (~1.0M) among all categories, suggesting it has relatively stronger traction in business/wholesale channels compared to other product types.

Donut Chart:



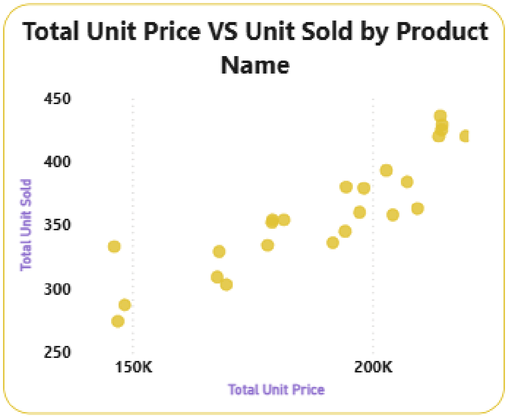
Key Insights:

- B2C is the dominant revenue driver — capturing 66.54% (~11M) of total sales, B2C accounts for nearly two-thirds of the business, highlighting a strong consumer-oriented sales model.
- B2B contributes a significant but smaller share — at 33.46% (~5M), B2B represents roughly one-third of total sales,

indicating a meaningful but secondary role in the overall revenue mix.

- A 2:1 revenue ratio exists between B2C and B2B — for every ~1 unit of B2B revenue, the business generates ~2 units of B2C revenue, suggesting an opportunity to invest more in B2B strategies to balance and grow overall sales.

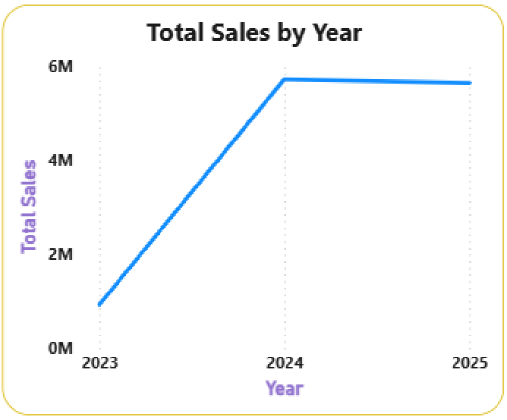
Scatter Plot:



Key Insights:

- Strong positive correlation between price and units sold — as Total Unit Price increases from ~150K to ~200K, Total Units Sold rises from ~275 to ~430, suggesting that higher-priced products are actually selling more, possibly reflecting premium demand or brand strength.
- Clustering near the 200K price range — a dense concentration of data points appears between 195K–205K with 350–440 units sold, indicating that most products are priced in this higher range and perform consistently well in volume.
- High variability at lower price points — products priced around ~150K show wider spread in units sold (275–330), suggesting inconsistent performance at lower price levels, possibly due to varying product appeal or market positioning.

Line Chart:



Key Insights:

- Explosive growth from 2023 to 2024 — Total Sales surged from approximately ~1M to ~6M, representing a nearly 5x increase in a single year, pointing to a major business expansion, successful campaigns, or market breakthrough in 2024.
- Growth plateaued in 2025 — sales remained nearly flat at ~5.8M–6M between 2024 and 2025, indicating the business has hit a growth ceiling and is now in a consolidation or saturation phase rather than continuing its upward trajectory.
- 2024 was the pivotal turning point — the sharp inflection in the line marks 2024 as the breakout year, and sustaining or surpassing this level in 2025 suggests the high sales volume has stabilized, making it critical to identify new growth levers to avoid stagnation going forward.

Bubble Map:

Key Insights:

- South and Central India dominate sales activity — the majority of bubble markers are concentrated in central to southern India (around Maharashtra, Telangana, Karnataka, and Tamil Nadu regions), indicating these zones are the core revenue-generating geographies.
- New Delhi is the key northern hub — a visible bubble near New Delhi represents the primary sales concentration in North India, while the rest of the northern and eastern regions appear largely untapped, revealing a significant geographic gap.
- Coastal and peninsular cities drive volume — the clustering of bubbles along the western and southern peninsular belt (likely cities such as Mumbai, Hyderabad, Bengaluru, and Chennai) suggests urban coastal markets are the strongest performers, pointing to an opportunity to expand into underrepresented regions like East and Northeast India.

Snitch Fashion Sales Analysis — Complete Dashboard Analysis

Key Metrics Overview

- Total Orders: 5M | Total Sales: 16M | Total Units Sold: 8,657 (out of 17K capacity)
- Units sold gauge shows ~51% fulfilment, suggesting room for growth in conversion or inventory utilization.

Types of Analysis Present

1. Trend Analysis *(Total Sales by Year)*
   - Sales grew ~5x from 2023 to 2024 (1M → 6M), then plateaued in 2025, signaling a maturity phase requiring new growth strategies.
2. Composition Analysis *(Total Sales by Segment)*
   - B2C (66.54% = 11M) dominates over B2B (33.46% = 5M) — business is heavily consumer-driven with untapped B2B potential.

3. Comparative Analysis (Total Sales by Product Category)

All 6 categories (T-Shirts, Jackets, Accessories, Dresses, Jeans, Shoes) perform near equally around 2M–3M, indicating a balanced but undifferentiated portfolio.

4. Segment Comparison Analysis (Sales by Category & Segment)

B2C consistently outperforms B2B across all categories — Accessories leads in B2B while T-Shirts lead in B2C.

5. Correlation Analysis (Unit Price VS Units Sold)

Positive correlation — higher-priced products (~200K) sell more units (~400+), suggesting premium products drive both volume and value.

6. Geospatial Analysis (Total Sales by City)

Sales concentrated in South & Central India (Mumbai, Hyderabad, Bengaluru, Chennai) with New Delhi as the sole northern hub — East & Northeast India remain untapped.

Strategic Insights

AREA	INSIGHT
GROWTH	2024 was breakout year; 2025 needs new levers
SEGMENT	Invest in B2B to balance the 2:1 B2C ratio
GEOGRAPHY	Expand to East/Northeast India
PRICING	Premium pricing strategy is working — scale it
PORTFOLIO	Diversify to create star-category differentiation

Conclusion:

Snitch Fashion has demonstrated strong business momentum, achieving 16M in total sales across 5M orders, with 2024 marking a transformational breakout year of nearly 5x growth. The brand is predominantly B2C driven (66.54%), with a balanced product portfolio across all 6 categories and a healthy positive correlation between premium pricing and sales volume.

However, growth has plateaued in 2025, geographic reach remains concentrated in South & Central India, and B2B contribution is still underdeveloped. To sustain and scale, Snitch must focus on expanding geographically into untapped regions, strengthening B2B channels, and creating differentiated star categories — while leveraging its proven premium pricing advantage to drive the next phase of growth.
